

Fair Test Practice — Answer Key

Level 1 · Ages 7-9 · Answers in bold. Accept any answer that means the same.

- ① Maya drops the same ball from the same height onto grass, and then onto concrete. She measures how high the ball bounces each time.

What changed? The surface the ball lands on (grass or concrete).

What was measured? How high the ball bounces.

One thing kept the same: The ball, or the height she drops it from.

- ② Leo puts one ice cube on a plate in a sunny window and one on the same kind of plate in a shady room. The ice cubes are the same size. He times how long each one takes to melt.

What changed? Where the ice cube is put (sunny or shady place).

What was measured? How long each ice cube takes to melt.

One thing kept the same: The size of the ice cubes, or the kind of plate.

- ③ Sam grows three bean plants in the same kind of pot on the same windowsill. Every day one plant gets one spoonful of water, one gets two and one gets three. After two weeks he measures how tall each plant is.

What changed? How much water each plant gets each day.

What was measured? How tall each plant grows.

One thing kept the same: The kind of pot, the windowsill, or the time (two weeks).

- ④ Ella puts one spoonful of sugar in a glass of cold water and one spoonful in a glass of warm water. Both glasses hold the same amount of water. She stirs each one at the same speed until she cannot see any sugar, and times how long it takes.

What changed? How warm the water is (cold or warm).

What was measured? How long the sugar takes to dissolve.

One thing kept the same: The amount of sugar, the amount of water, or the stirring.

- ⑤ Ava folds two paper planes from the same kind of paper. One has short wings and one has long wings. She throws each plane the same way and measures how far it flies.

What changed? The size of the wings (short or long).

What was measured? How far each plane flies.

One thing kept the same: The kind of paper, or the way she throws it.
