

My Observations

Use your senses. Look closely before you write.

Name _____ Date _____

Safety: Never taste anything in science. Only smell something if your teacher says it is safe.

What I am observing

What I see Colors, shapes, size, movement.

What I hear Any sounds it makes.

What I measure or count How many? How big? How long?

My drawing Draw what you observe. Label the parts.

Notes and questions Anything you wonder about.

Observation Record

Separate qualitative observations (described) from quantitative observations (measured, with units).

Name _____ Date _____

Safety: Follow the lab safety rules. Never taste; waft to smell only when permitted.

What I am observing

Qualitative observations

Described, not measured: color, texture, state, smell, sound, changes over time.

Quantitative observations

Measured, with units and the instrument used: mass / g, volume / ml, temperature / degrees C, time / s.

Anything unexpected Note it even if it looks like a mistake.

My drawing Draw what you observe. Label the parts.

Notes and questions Anything you wonder about.

Observation Sheet

An observation is what you actually notice. A conclusion is what you work out later - keep them separate.

Name _____ Date _____

Safety: Never taste anything. Only smell a substance if your teacher says it is safe, and waft it towards you.

What I am observing

What I see Color, shape, size, state, changes.

What I hear, feel or (safely) smell Texture, temperature, sound.

What I measure Numbers with units: cm, g, ml, seconds, degrees C.

My drawing Draw what you observe. Label the parts.

Notes and questions Anything you wonder about.
