

Writing a Hypothesis

A good hypothesis is testable and falsifiable: it must be possible for the evidence to disagree with it.

Name _____ Date _____

Worked example

If the concentration of salt increases, then the time taken for the ice to melt will decrease, because dissolved salt lowers the freezing point of water.

What makes a hypothesis good?

It names what you will change, names what you will measure, and gives a reason. It can turn out to be wrong - that is what testing is for.

Hypothesis 1

If _____
then _____
because _____

Hypothesis 2

If _____
then _____
because _____

Hypothesis 3

If _____
then _____
because _____
