Discoveries!

Name: _____
Date: _____

A. Tick the things ALL animals need to stay alive.

All animals need these to live and be healthy!

B. A plant is growing in a pot. Tick the things it needs.

Plants need certain things to grow and stay healthy!

C. Complete each sentence using the word bank.

- 1 A rabbit gets energy from _____.
- 2 A rabbit breathes oxygen from the _____.
- 3 A plant uses _____ to make its own food.
- 4 Roots absorb _____ from the soil.
- 5 Living things need _____ to avoid drying out.

Word Bank

water

air

food

light

nutrients

Food gives us energy to move, grow and stay healthy!

D. Explain: Why does an animal need food?

Think and write your ideas!

Discoveries!

Name: _____
Date: _____

A Living things carry out life processes. Match each process to the best example.

1  Grows 2  Reproduces 3  Responds 4  Uses energy 5  Exchanges gases 6  Gets rid of waste	A A sunflower bends toward light.  B A puppy becomes a larger adult dog.  C A bird produces chicks.  D A child uses energy from food to run.  E A fish takes oxygen from water.  F A person removes waste in urine. 
---	--

B Read each statement. Write **YES** if it is good evidence of life, or **NO** if it is not enough by itself.

1 It gets bigger over time. 2 It can move from place to place. 3 It produces offspring.	4 It uses energy. 5 It is warm.
---	--

Think: Many non-living things can move or be warm!

C Why is movement alone **NOT** enough to prove that something is alive?

You can do it! ♥

1

Dormant seed

- ☐ Living
☐ Non-living

Evidence: _____

2

Fire

- ☐ Living
☐ Non-living

Evidence: _____

3

Robot

- ☐ Living
☐ Non-living

Evidence: _____

4

Crystal

- ☐ Living
☐ Non-living

Evidence: _____

5

Oak tree

- ☐ Living
☐ Non-living

Evidence: _____

6

Cloud

- ☐ Living
☐ Non-living

Evidence: _____

Final challenge:

Fire grows and uses oxygen. Why is it still not classified as living?

Elementary Science

What Do Living Things Need?

LEVEL 2

ANSWER SHEET

Name: _____
Date: _____

Explore
Observe
Learn
Grow!

A Tick the things **ALL** animals need to stay alive.

Water

☒

Air

☒

Food

☒

Sunlight

☐

Toys

☐

Suitable temperature

☒

Animals need these things to live, grow and be healthy!

B A plant is growing in a pot. Tick the things it needs.

Water

☒

Light

☒

Air

☒

Nutrients

☒

Chocolate

☐

Television

☐

Plants need these things to grow well!

C Use the word bank to fill in the blanks.

water air food light nutrients

1. Animals need food to get energy.
2. Animals need air to breathe.
3. Plants need light from the sun to make their own food.
4. Plants need nutrients from the soil to grow.
5. All living things need water.

Living things need different things to stay alive!

D Why does an animal need food?

Food gives an animal energy to move, grow and stay alive.

Food helps animals to be strong and healthy!

How Do We Know Something Is Alive? — Answer

Living Things • Level 3

A. Match each life process to the best example.

1. Grows

Answer: A puppy becomes a larger adult dog.

2. Reproduces

Answer: A bird produces chicks.

3. Responds

Answer: A sunflower bends toward light.

4. Uses energy

Answer: A child uses energy from food to run.

5. Exchanges gases

Answer: A fish takes oxygen from water.

6. Gets rid of waste

Answer: A person removes waste in urine.

B. Is this good evidence of life by itself? (Many non-living things can move or be warm!)

1. It gets bigger over time.

Answer: NO — non-living things can also get bigger (crystals, icicles, fire), so growth alone isn't enough.

2. It can move from place to place.

Answer: NO — non-living things move too (cars, clouds, rivers).

3. It produces offspring.

Answer: YES — reproduction is unique to living things, so this alone is reliable evidence.

4. It uses energy.

Answer: NO — non-living things use energy too (cars, machines, batteries).

5. It is warm.

Answer: NO — non-living things can be warm too (fire, engines, the Sun).

C. Why is movement alone NOT enough to prove that something is alive?

Answer: Because many non-living things — like cars, wind, clouds and rivers — can also move without being alive. Movement has to be combined with other life processes (growing, reproducing, using energy) before it counts as real evidence of life.

Elementary Science

Classification Challenge

LEVEL 4

ANSWER SHEET

Name: _____

Date: _____

Here are the correct answers with scientific evidence!

Great Scientists Think Big!

1

Dormant seed

✓

LIVING

Evidence: It is alive but inactive. It can germinate, grow, respire and reproduce later.

2

Fire

✗

NON-LIVING

Evidence: It can spread and use oxygen, but it is not made of cells and does not carry out all life processes.

3

Robot

✗

NON-LIVING

Evidence: It can move if programmed, but it is not made of cells and does not grow or reproduce by itself.

4

Crystal

✗

NON-LIVING

Evidence: It can get bigger as material is added, but it does not use energy or reproduce like a living thing.

5

Oak tree

✓

LIVING

Evidence: It grows, uses energy, exchanges gases and reproduces.

6

Cloud

✗

NON-LIVING

Evidence: It can move and change shape, but it is not made of cells and does not perform life processes.

Challenge:

Answer the question:

Fire is not living because it is not made of cells and does not carry out all the life processes of living things.
