

Elementary Science

Conductors & Insulators

Level 3

Topic 10: Electricity & Magnets | Answer Sheet 3

Name: _____

Date: _____

A Look at the test results.

Material	Bulb lights?
metal paper clip	YES
coin	YES
plastic spoon	NO
wood block	NO
rubber	NO

If the bulb lights, the material allows electricity to pass through.

B Match each word to its meaning

conductor

often used to cover wires

insulator

lets electricity pass through easily

metal

often a good conductor

plastic

does not let electricity pass through easily

C Use the results to answer.

1. Which two tested materials were conductors?
paper clip and coin

2. Which tested materials were insulators?
plastic, wood and rubber

3. Which material type is often used inside wires?
metal

4. Which material is useful around the outside of wires?
plastic or rubber

D Explain: Why do wires have two parts?

metal core

plastic coating

The metal core conducts electricity. The plastic coating is an insulator that helps keep the current away from our hands.

Conductors let current through; insulators help keep us safe.
