

Fast, Slow and Friction — Answer Key

Forces and Motion • Level 2

A. Sort them — draw a line to fast or slow.

1. A racing car

Answer: fast

2. A snail

Answer: slow

3. A rabbit running

Answer: fast

4. A tortoise

Answer: slow

5. A bicycle going downhill

Answer: fast

B. Circle the best surface.

1. Which surface makes a toy car slow down more — carpet, smooth floor, or ice?

Answer: carpet

2. Which surface is easiest for a sled to slide on — grass, ice, or sand?

Answer: ice

3. Which surface has more friction for walking — wet floor, rough path, or ice?

Answer: rough path

4. Which surface lets a ball roll farther — carpet, grass, or smooth floor?

Answer: smooth floor

C. Fill in the blanks (word bank: fast, slow, friction, smooth, rough).

1. Friction can _____ things down.

Answer: slow

2. A snail moves _____.

Answer: slow

3. A racing car can go _____.

Answer: fast

4. A _____ surface lets things slide more easily.

Answer: smooth

5. A _____ surface has more grip.

Answer: rough

D. Why does friction matter?

Answer: Friction slows things down and gives grip, so wheels, feet and objects don't slide out of control — it lets us push, walk and stop safely.
