Fast, Slow and Friction

Let's explore how speed and friction affect motion!

Small
Steps
Big
Scientists!

Name: _____

Date: _____

A. Sort them.

Look at each picture. Draw a line to the correct word.

- | | | | |
|---|--|----------------------------|--------|
| 1 | | A racing car • | • slow |
| | | | • fast |
| 2 | | A snail • | • fast |
| | | | • slow |
| 3 | | A rabbit running • | • slow |
| | | | • fast |
| 4 | | A tortoise • | • fast |
| | | | • slow |
| 5 | | A bicycle going downhill • | • slow |
| | | | • fast |

B. Circle the best surface.

Look at each picture. Which surface is the best answer?

- | | |
|--|---|
| 1. Which surface makes a toy car slow down more? | 2. Which surface is easiest for a sled to slide on? |
| | |
|
carpet
smooth floor
ice |
grass
ice
sand |
| 3. Which surface has more friction for walking? | 4. Which surface lets a ball roll farther? |
| | |
|
wet floor
rough path
ice |
carpet
grass
smooth floor |

C. Fill in the blanks using the word bank.

Word bank: fast slow friction smooth rough

- Friction can _____ things down.
- A snail moves _____.
- A racing car can go _____.
- A _____ surface lets things slide more easily.
- A _____ surface has more grip.

D. Why does friction matter?

Look at the picture. Write a short answer.

Friction can be helpful!

Why does friction matter?

Forces help things move! ♥
