

Body Systems Working Together — Answer Key

Human Body and Senses • Level 4

A. Match each body system to its job.

1. respiratory system

Answer: helps you breathe

2. digestive system

Answer: breaks down food

3. circulatory system

Answer: carries blood and oxygen

4. skeletal and muscular system

Answer: moves your body

B. Sam is running at the park — his heart beats faster, he breathes faster, and his legs move.

1. Which system helps you breathe faster when you run?

Answer: The respiratory system.

2. Which system moves your arms and legs?

Answer: The skeletal and muscular system.

3. Which system carries oxygen around your body?

Answer: The circulatory system.

4. Why do body systems need to work together?

Answer: Each system has its own job, and the body needs all of them working together at the same time to run, breathe and move safely.

C. True or False?

1. The digestive system helps break down food.

Answer: True

2. The respiratory system helps you hear.

Answer: False — the respiratory system helps you breathe; hearing is done by the ears.

3. Your body systems work together.

Answer: True

4. Muscles and bones help you move.

Answer: True

D. What could happen if one body system did not work properly?

Answer: It could affect the whole body — for example, if the respiratory system didn't work well, the body wouldn't get enough oxygen, which would also affect the circulatory system and make it hard to be active.
