

Shadows — Answer Key

Light and Sound • Level 2

A. Match each word to its meaning.

1. shadow

Answer: a dark shape made when light is blocked

2. opaque

Answer: blocks light

3. transparent

Answer: lets most light pass through

4. light source

Answer: gives off light

B. Choose the correct shadow for the toy shown (a circle with a triangle on top).

1. Which shape is the toy's shadow — A (plain circle), B (keyhole shape), or C (circle with a triangle on top)?

Answer: C — a shadow's outline always matches the outline of the object blocking the light.

C. Complete the sentences (word bank: blocked, longer, shorter, light).

1. A shadow forms when _____ is blocked.

Answer: light

2. An opaque object _____ light.

Answer: blocks (blocked)

3. A low Sun can make shadows look _____.

Answer: longer

4. When the Sun is high, shadows are often _____.

Answer: shorter

D. Why do shadows change size?

Answer: Shadow size depends on where the light source is. When the light is low or close to an object, the shadow stretches out and looks longer; when the light is high overhead, the shadow is shorter. Moving an object closer to the light also makes its shadow bigger.
