

A Living things carry out life processes. Match each process to the best example.

1  Grows	•	•	A A sunflower bends toward light. 
2  Reproduces	•	•	B A puppy becomes a larger adult dog. 
3  Responds	•	•	C A bird produces chicks. 
4  Uses energy	•	•	D A child uses energy from food to run. 
5  Exchanges gases	•	•	E A fish takes oxygen from water. 
6  Gets rid of waste	•	•	F A person removes waste in urine. 

B Read each statement. Write **YES** if it is good evidence of life, or **NO** if it is not enough by itself.

1 It gets bigger over time.	4 It uses energy.
2 It can move from place to place.	5 It is warm.
3 It produces offspring.	 Think: Many non-living things can move or be warm!

C Why is movement alone NOT enough to prove that something is alive?
